

## Angles Professional Hair Care Centres

Mr. Stuart Taube  
Hydroxyl Environmental Inc

Thank you for selecting Angles to test your Odorox Hydroxyl Generator in our hair and beauty salon during the month of November. As you know Hair Salons are full of VOC's (Volatile Organic Compounds) and other difficult odours derived from chemical solutions used on a variety of applications such as perms. Some of these odours are nearly impossible to get out and at times can be irritants to my employees or customers.

Your machine was simply amazing, not only did it get the airborne odours out of the ambient air in only a few hours, but after operating over night all of the odours were eradicated from the walls, surfaces and furniture. Each morning we came into an odourless sanitized environment that felt fresh and clean. We don't understand how you got the odours out of the furniture without it passing through the machine but we can't complain about the result.

When you informed me that the elevated oxygen that emits from the machine would eliminate the tiredness we all feel by the end of the day I didn't believe you. Well I must say I will never doubt you now, the clean oxygen rich air not only surprised me in how it eliminated my normal afternoon fatigue but others including customers commented on it too.

Thank you once again for showcasing your technology in our facility.
