

To whom it may concern,

I have to let you know how happy we are with the results we achieved with the use of ODOROX HYDROXYL.

Being in the fire restoration business, we come across many unusual odors. In the past, we have relied a great deal on Ozone Technology to deal with these problems. One particular odor we have come across a number of times throughout the years is home heating oil. It is one of the most difficult odors to remove.

After purchasing the ODOROX equipment, we set it up in a residential basement. After two days, there was a noticeable reduction in odor and after five days, the odor was completely gone. This impressed not only myself, but the homeowner, oil company, and the environmental engineer sent to monitor the air quality.

The equipment seemed expensive after being purchased, however the results were great. I definitely recommend the use of ODOROX HYDROXYL Technology.

Sincerely,

Timothy Devine
